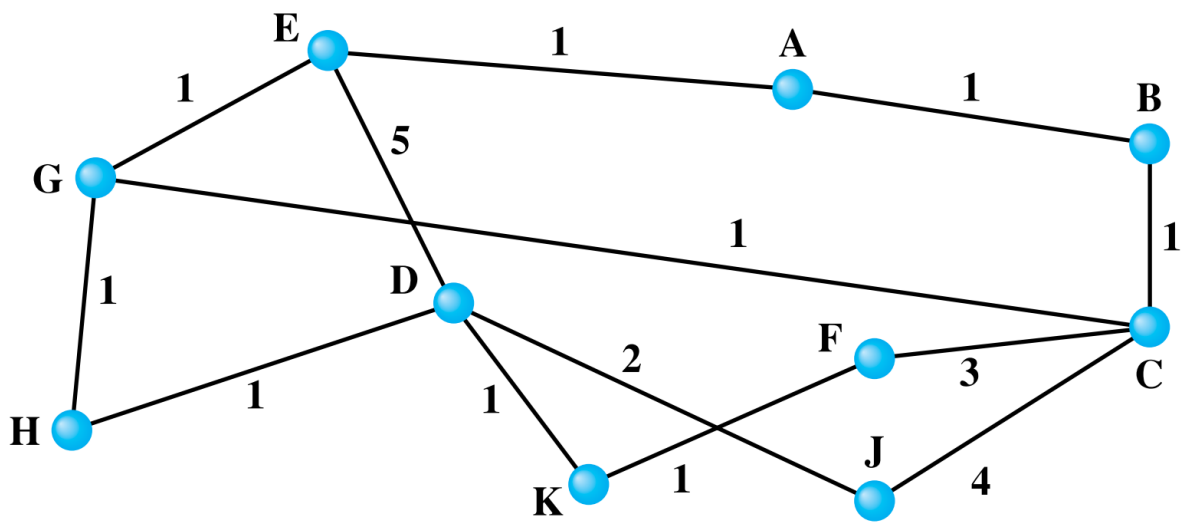
CS425: Computer Networks
Homework-3
Due date: Friday 10/04/2026
Total marks 100

1. **(30+30 points)** Write a program (in any language) that implements the Dijkstra's (or Link state) and Bellman-Ford (Distance vector) shortest path algorithm on the following graph.



Your output should work as follows. It will take the source and destination from the user and will give the entire route with the corresponding cost.

2. **(40 points)** Please write a socket programming for UDP client server application with 1 server and 1 client. You can reuse the code shown in the class and can do some small changes as needed.
